Use RS 676 Ladder Game for recording or draw your own.

Child rolls a dice twice to give two 1-digit numbers (e.g. 3 and 5). They write the two numbers as an addition in the bottom space of the ladder and write the total on the rung above.

They roll the dice again once, write that number in the space next to the first rung, add it to the first total and write the new total on the ladder rung above.

Continue so that child makes a ladder of ten numbers.

What is the final total?
